2ND IDSA Summit
Achieving market adoption.

June 25 & 26, 2019
Deutsche Telekom Campus
Landgrabenweg 151
Bonn | Germany

21 Interactive sessions  17 Speeches  18 Use case pitches
Why should you be involved in the IDSA right now?

Here is what politicians think about it:

Dr. Angela Merkel
German Chancellor

"The IDS initiative is very important, so that companies are willing to make their data available in such a way that completely new applications emerge from it."

Federal Minister of Economics Peter Altmaier often talks about the 'data airbus'. The data airbus is the infrastructure. And IDS is the engine driving it along.

Anja Karliczek
German Minister of Education and Research

Here is what business representatives think about it:

Dr. Ulrich Störk
PwC Germany

"IDSA is an association where industry and research are actively involved in designing a trusted architecture for the data economy."

IDSA is an association where industry and research are actively involved in designing a trusted architecture for the data economy.

Michael Bültmann
HERE Technologies

"We very much welcome the fact that IDS are not only working at a national industrial but at a cross-sector and international level."

Sven Löffler
T-Systems

"IDS_ready helps create competitive edge, as it allows us to implement real data sovereignty in the digital world for the first time ever."

We very much welcome the fact that IDS are not only working at a national industrial but at a cross-sector and international level.

By combining the IDS and blockchain technologies, we can provide better solutions. These two strategies are complementary and will help deliver better value and added benefits to clients.

Sven Löffler
T-Systems

"IDS_ready helps create competitive edge, as it allows us to implement real data sovereignty in the digital world for the first time ever."

Michael Bültmann
HERE Technologies

"We very much welcome the fact that IDS are not only working at a national industrial but at a cross-sector and international level."

Here is what representatives from international research organisations think about it:

Henk Jan Vink
TNO Information and Communication Technology

"IDS has the potential to become the best data sharing initiative globally."

We have to implement IDS standards based on European values and, in particular, take the competitive situation with China and Silicon Valley seriously and continue to work globally.

Prof. Dr. Peter Bruck
Data Intelligence Offensive Austria

Here is what we think about it:

Dr. Reinhold Achatz
thyssenkrupp AG and Chairman IDSA

"Industry needs open and reliable standards in order to efficiently shape hybrid value added chains together. The IDS initiative offers companies of all sizes and from all industries the opportunity to help shape the foundations for their future data exchange."

Dr. Reinhold Achatz
thyssenkrupp AG and Chairman IDSA

"Industry needs open and reliable standards in order to efficiently shape hybrid value added chains together. The IDS initiative offers companies of all sizes and from all industries the opportunity to help shape the foundations for their future data exchange."

Data is increasingly becoming a strategic resource in digital ecosystems. With the IDS, we are creating the architecture that will make such digital ecosystems successful.

"At IDSA an international community is working on the missing link in the IoT: a global semantic standard for data sovereignty - rules and policies that determine who can do what with which data in which context."

Prof. Dr. Boris Otto
Fraunhofer-ISST and Deputy Chairman IDSA

The focus of the IDS Reference Architecture Model lies on ‘Certification’, ‘Data Security’ and ‘Data Governance’. This defines on a new level safety standards, control and enforcement rules for the data usage and the traceability of data origin.

Lars Nagel
CEO IDSA

"At IDSA an international community is working on the missing link in the IoT: a global semantic standard for data sovereignty - rules and policies that determine who can do what with which data in which context."

"The focus of the IDS Reference Architecture Model lies on ‘Certification’, ‘Data Security’ and ‘Data Governance’. This defines on a new level safety standards, control and enforcement rules for the data usage and the traceability of data origin."
